

## Instructions for Positions in Learning to Write.

**POSITION OF THE BODY.**—Sit or stand in an easy manner, without pressing the Chest against the Desk. **POSITION OF THE RIGHT ARM, HAND and WRIST.**—Extend the right elbow a little; rest the right arm near the elbow, and the right hand upon the side of the tip of the little finger, *without letting the wrist touch the desk*; till this position be accomplished, no one can write with ease; *pressure upon the wrist* is frequently the **ONLY** preventive to freedom in writing. **POSITION OF FINGERS AND THUMB.**—Divide the third and fourth fingers from the first and second; do not extend them too stiffly; bend the thumb a little towards the first joint of the forefinger. **POSITION OF THE PEN.**—Place the pen between the thumb and first and second fingers of the right hand, but not too far from the nib, and hold it very lightly; let the feather or upper end point a little to the right of the shoulder, and *let it not fall below the knuckle joint of the forefinger*. **POSITION OF THE LEFT ARM, ELBOW AND HAND.**—Place the left elbow on the desk upon a level with the line being written, and hold the paper down by placing the middle finger of the left hand nearly under the letter you are forming. **POSITION OF THE RIGHT EYE.**—Let it be immediately vertical to the letter being formed, and not *beyond* nor *within* its focal distance.
